HOW NUTRIENTS BENEFIT YOUR HORSE

Biotin-----	Essential to healthy hooves! Helps hoof growth and strength
Calcium (ca)-----	Builds strong bones and sound teeth. Especially important during lactation.
Choline-----	Aids fat mobilization in the liver.
Cobalamine (Vit B12)-----	A co-enzyme, linked with choline, folacin and pantothenic acid.
Cobalt (Co)-----	For synthesis of Vitamin B-12 in the intestinal tract.
Copper (Cu)-----	For normal bone development. Copper, Iron and Vitamin B-12 form red blood cells.
Crude Fat-----	Carrier of Vitamins A, D, and K. Builds healthy skin and hair.
Crude Fiber-----	A basic nutrient, aiding in digestion.
Crude Protein-----	Essential for growth, maintenance and every phase of life.
Folic acid-----	For growth, reproduction and prevention of blood disorders.
Iodine-----	Helps control rate of body metabolism and heat production.
Lysine (amino acid)-----	An essential amino acid.
Magnesium (Mg)-----	Reduces stress and irritability.
Manganese (Mn)-----	Normal bone formation, growth and reproduction.
Methionine (amino acid)-----	An essential amino acid.
MSM-----	Protects against joint inflammation.
Niacin-----	Helps release energy from carbohydrates, fats and proteins.
Oxy-Equine (octacosanol)-----	Improves blood / oxygen exchange in the lungs, which helps increase defenses against respiratory ailments, improve stamina, stimulate muscle development and maintain a bright hair coat.
Pantothenic Acid (Vit B3)-----	Plays a key role in body metabolism.
Phosphorus (P)-----	Important for bone growth and strength.
Pyridoxine (Vit B6)-----	Promotes good hair coat; aids the nervous system and growth.
Riboflavin (Vit B2)-----	Essential role in oxidative mechanisms of the cell.
Selenium (Se)-----	Prevents white muscle disease and "tying up."
Thiamin (Vitamin B1)-----	Aids in energy metabolism. Promotes appetite and growth.
Vitamin A-----	For coordination, respiration, hoof development, good bones and joints.
Vitamin C (Ascorbic Acid)-----	Critical for horses under stress or heavy training.
Vitamin D3-----	Essential for stalled horses without adequate sunshine.
Vitamin E-----	Works with selenium to prevent "tying up."
Vitamin K-----	Aids in blood clotting.
Yucca-----	Dilutes urine odor in stalls.
Zinc (Zn)-----	Imparts bloom to hair coat. Important to enzyme systems and metabolism.
